Individual speed	The transmission speeds listed represent optimum performance and are not guaranteed. Actual internet speed depends on individual factors that are under the control of the customer or a third party, such as the capacity of the end device, type of connection in the residence, the building's structural characteristics, the distance to the next telephone switchboard, the quality of the connections or other factors and may be slower than the specified maximum internet speed. Cumulative and simultaneous use by various end devices (e.g., TV, mobile & laptop) reduces the bandwidth available for each device.
